

CHECKLIST OF ALASKA BIRDS

23rd edition—2017

As of 1 January 2017 the list of avian taxa known in Alaska included 514 naturally-occurring species in 66 families and 21 orders. Phylogenetic sequence, limits of orders, families, and genera and English and scientific names of species follow The A.O.U. Check-list of North American Birds (7th ed., American Ornithologists' Union 1998) and supplements (through 2016). Founded on archived specimens, this checklist increasingly includes new species known in Alaska only from (archived) photos, videotapes, and/or audio recordings. An appended 'unsubstantiated' list comprises an additional 22 species—including two species pairs—attributed to Alaska without specimen or photo substantiation.

KEY TO SYMBOLS:

- ✓ RARE (Annual or possibly annual in small numbers; most such species occur at the perimeter of Alaska, in season; a few are scarce residents)
- ★ CASUAL (Not annual; these species are beyond the periphery of annual range, but recur in Alaska at irregular intervals, usually in seasonal and regional patterns)
- ⊛ ACCIDENTAL (One or two Alaska records)
